AHERA Notification

Dear Parents:

The Mount Carmel Area School District acknowledges the presence of (ACBM) asbestos-containing building materials remaining in the high school. All other ACBM has been removed. The building contains a small amount of non-friable (fibers are not released in the air) asbestos containing floor tile located outside the Auditorium on the first floor. The mastic that was used to glue the 12" x 12" floor tile down throughout the school classrooms contains minimal asbestos. With our strict floor care procedures, and the bi-yearly inspections, there is no concern with the minimal amount of asbestos in the high school building.

The building is inspected every six months by trained/certified maintenance personnel to monitor these areas. Every three years, we also have a contract with a private certified asbestos company to perform an inspection as well as update the school management plan. We adhere to the state and federal guidelines for controlling asbestos in our school buildings. The elementary school has been inspected, construction documents reviewed, and no ACBM has been found to be in the building.

Questions may be directed to our certified asbestos supervisor Dave Fegley at the Mt. Carmel Area Elementary School
